

SASINDU ROSHAN

Aspiring Network & Cloud Engineer

diassasindu121@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE

A/L Physical Science student (Combined Maths) from Sri Lanka with a strong, self-driven interest in networking, systems, and cloud technologies. Builds hands-on projects — from embedded network hardware to backend-integrated web systems — to learn by doing. Seeking opportunities to grow into a network/cloud engineering role through continued study, certification, and practical experience.

EDUCATION

G.C.E. Advanced Level — Physical Science Stream

Sri Lanka

- Subjects: Combined Mathematics, Physics, Chemistry
- Results pending / available on request

CERTIFICATIONS

Introduction to Large Language Models

IBM SkillsBuild · 2025

- Fundamentals of AI architecture, LLMs, natural language processing, and prompt design principles.

PROJECTS

WAN Failover Controller

Personal Project · ESP32, C++

- Designed an out-of-band network controller that monitors WAN link latency via ICMP polling and automatically fails over to a backup router through hardware relays when sustained latency indicates ISP throttling or link failure.
- Implemented live Telegram Bot alerting so failover events are reported remotely in real time.
- Solved a key limitation of standard gateways — that a throttled connection still reads as "up" — by tracking a rolling latency streak against a threshold rather than relying on basic link-status checks.

SiteScope

Personal Project · Firefox Extension, JavaScript

- Built a fully offline browsing-activity logger using the WebExtensions API and chrome.storage.local, with zero network calls or telemetry by design.
- Designed a chat-style popup interface with rule-based, pattern-matched URL categorization running entirely client-side.
- Implemented storage pruning logic to cap local log growth and keep the extension performant over weeks of use.

Personal Portfolio Website

xasii121.github.io/portfolio

- Developed a fully custom portfolio site (HTML/CSS/JS) featuring an interactive D3.js network topology diagram and WebGL visual elements.
- Integrated a working contact form via the Formspree API with Google reCAPTCHA v2 for spam mitigation.
- Decoupled certifications and skills content from the page markup into a JSON-driven data layer for easy long-term maintenance.

TECHNICAL SKILLS

Networking

- Networking Fundamentals, Subnetting & VLANs, Cisco Packet Tracer

Systems

- Linux

Development

- JavaScript, Web Development, basic API integration
